

JS Libraries and Frameworks-

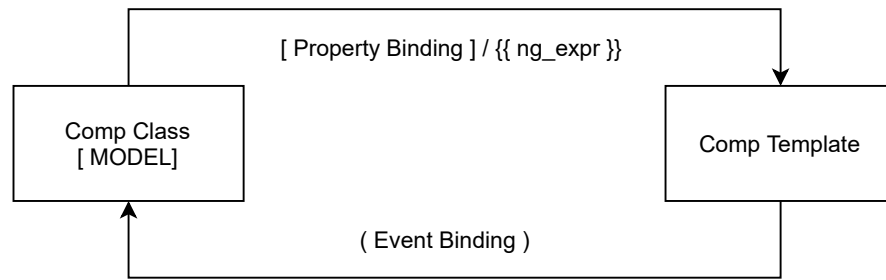

- jQuery : DOM manipulation and ajax
- React - model is changed very frequently. Component based architecture
- KnockoutJS - MVVM- 2 way data binding
- BackboneJS - MVC at client end
- PolymerJS - Custom Components
- EmberJS - Framework, Frequent internal API Changes
- NodeJS - platform; NRE - Server-side script
- ExpressJS - Web app framework for Node App
- VueJS - Library
- Angular : DOM Manipulation, 2 way data binding, SPA, template, MVC, Component etc,

> npm install typescript -g

Angular Bootstrap Process

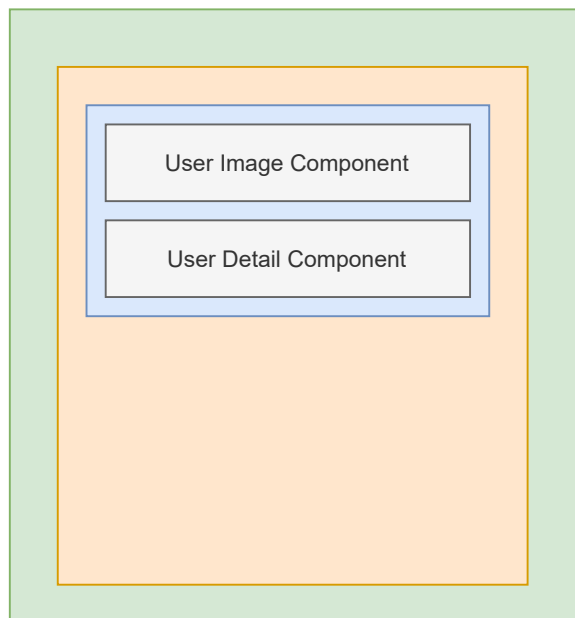

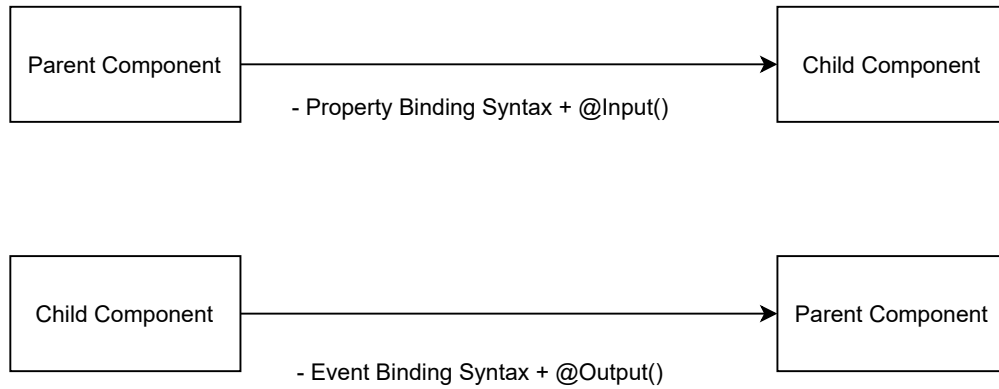

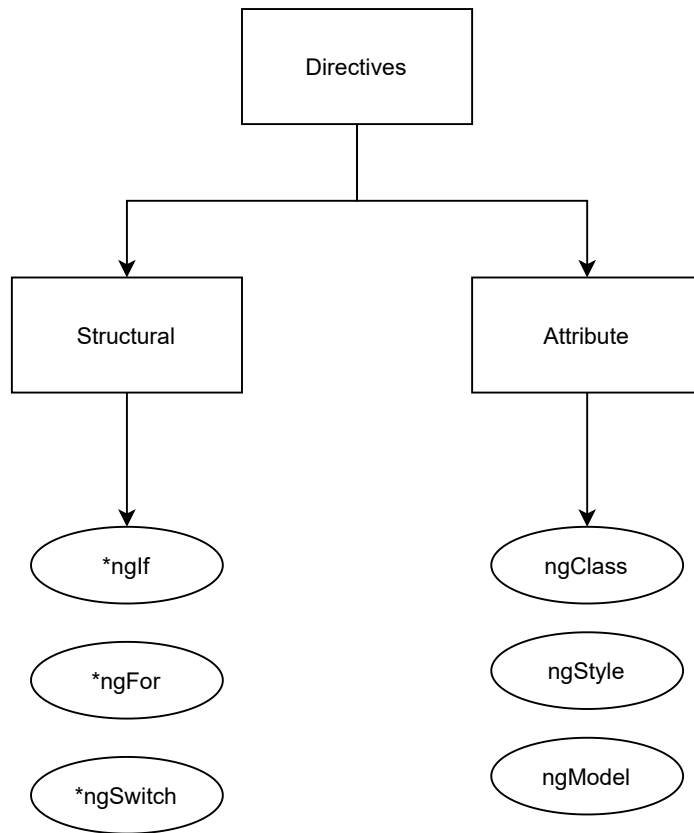

2 way data binding

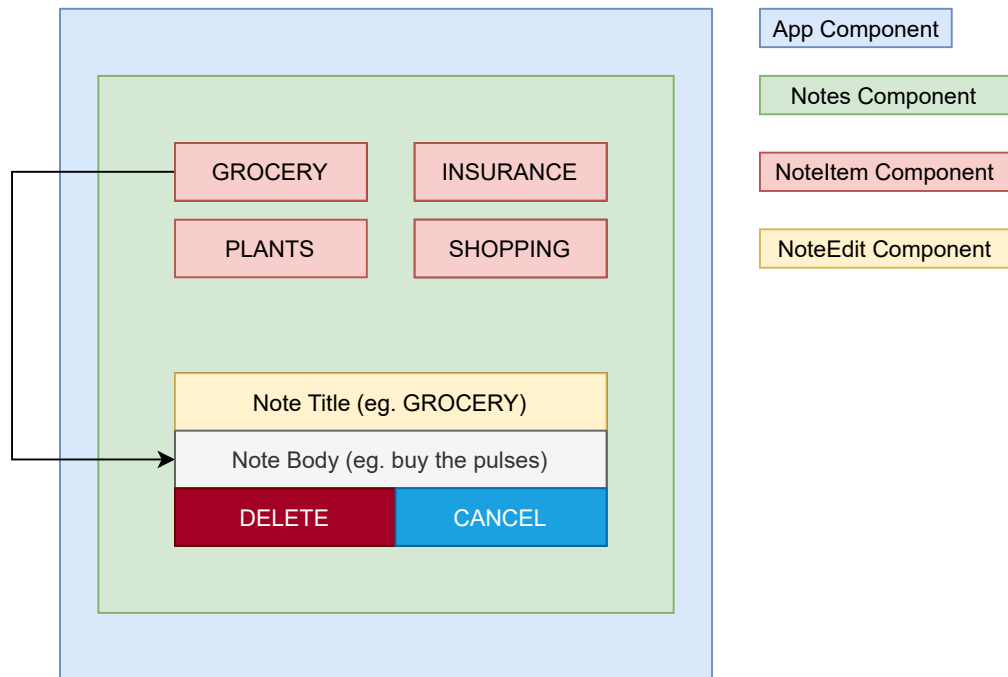

- Clubbing the [PB] + (EB)
- Banana in the Box - [(ngModel)]

Component Communication

Notes App

The Notes App - Instructions

- App should contain the notes collections as follows :

```
[  
  { id : 1, title : "grocery", body : "to buy the pulses"},  
  { id : 2, title : "shopping", body : "to buy the jeans"},  
  { id : 3, title : "plants", body : "to pot the plants"},  
  { id : 3, title : "insurance", body : "to renew car insurance"},  
]
```

- Should create three components mentioned in picture :

- Notes : Container component, will contains NoteItem and NoteEdit Component
- NoteItem : displays individual item present in notes collection
- NoteEdit : display the note body and enables to delete the note from the collection

- Should display NoteEdit component on click of any of the NoteItem

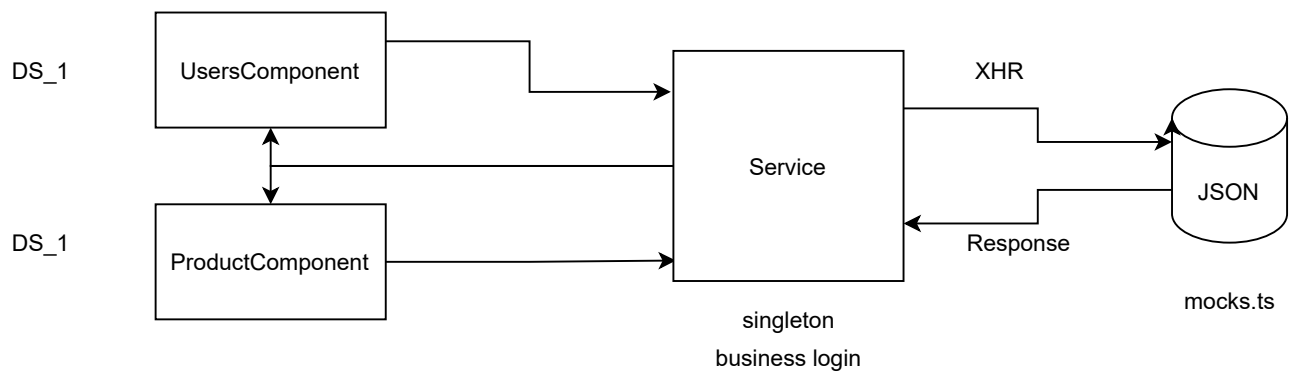

- Should use @Input / @Output for component communication.

Form & Form element - State and Classes

- ngValid | ngInvalid
- ngPristine | ngDirty
- ngTouched | ngUntouched

data service log service auth service

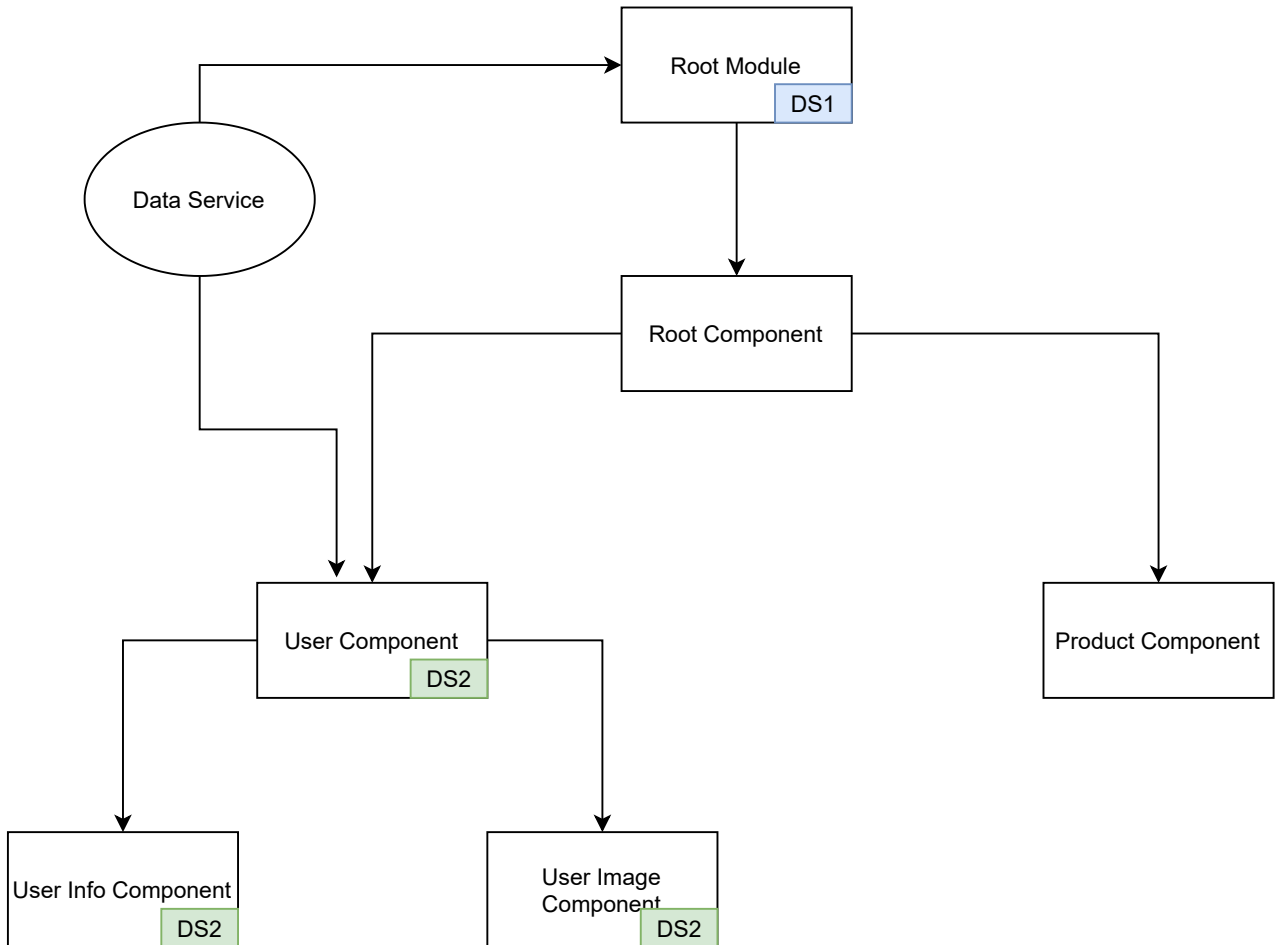

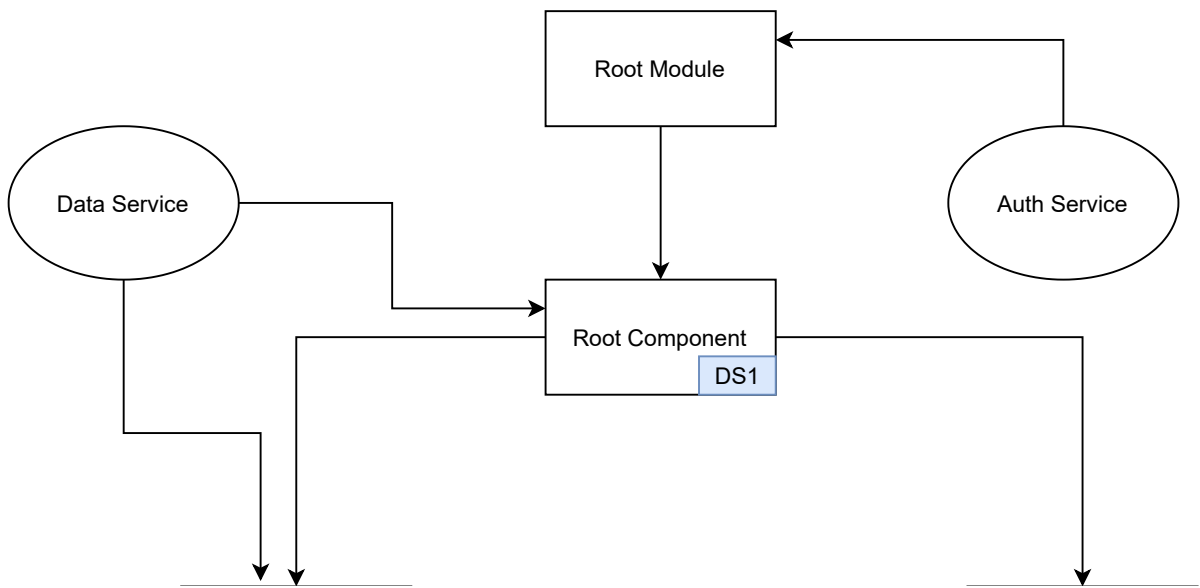

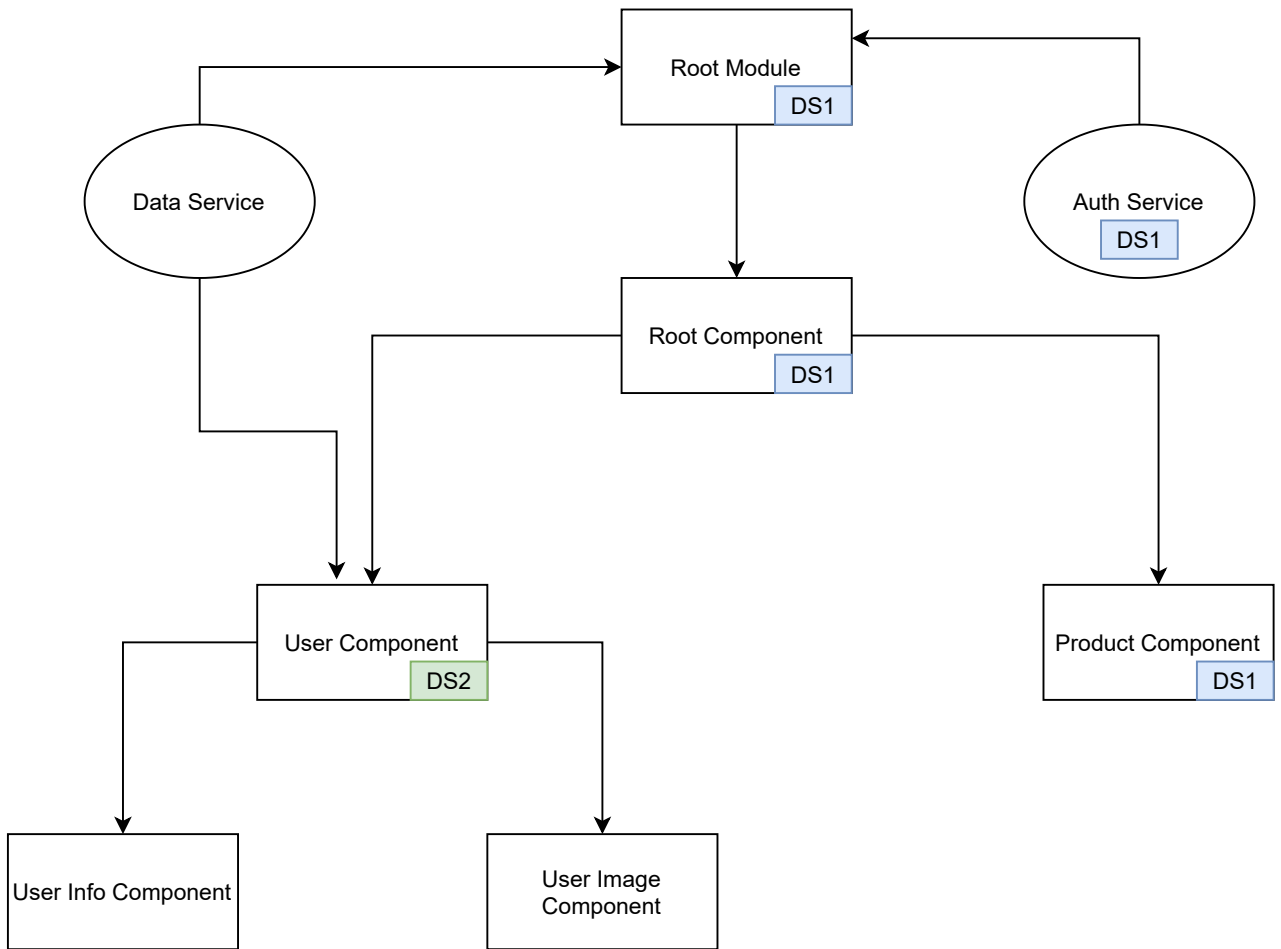

Service Principles

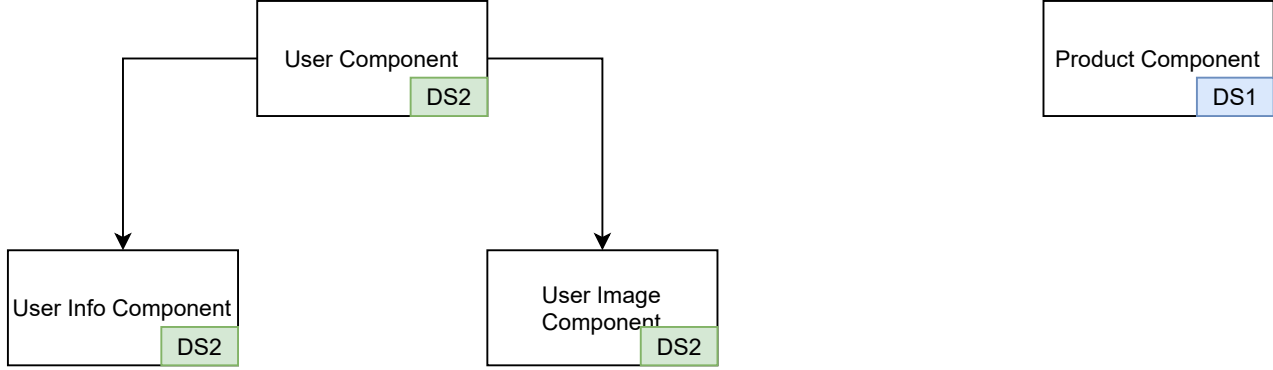

- Single Responsibility
- Dependency Injection

Multiple Service Registration

Handling JS Async -

- Callback Functions
- Promises
- Async ... await
- Observables

Interceptors

Routing Terminologies

- Routes : route configuration
- RouterModule : provides route config
- RouterLink : create links to change URL
- RouterOutlet : provide space on template
- RouteParameter : /
- QueryParameter : ?
- ActivatedRoute : info in URL

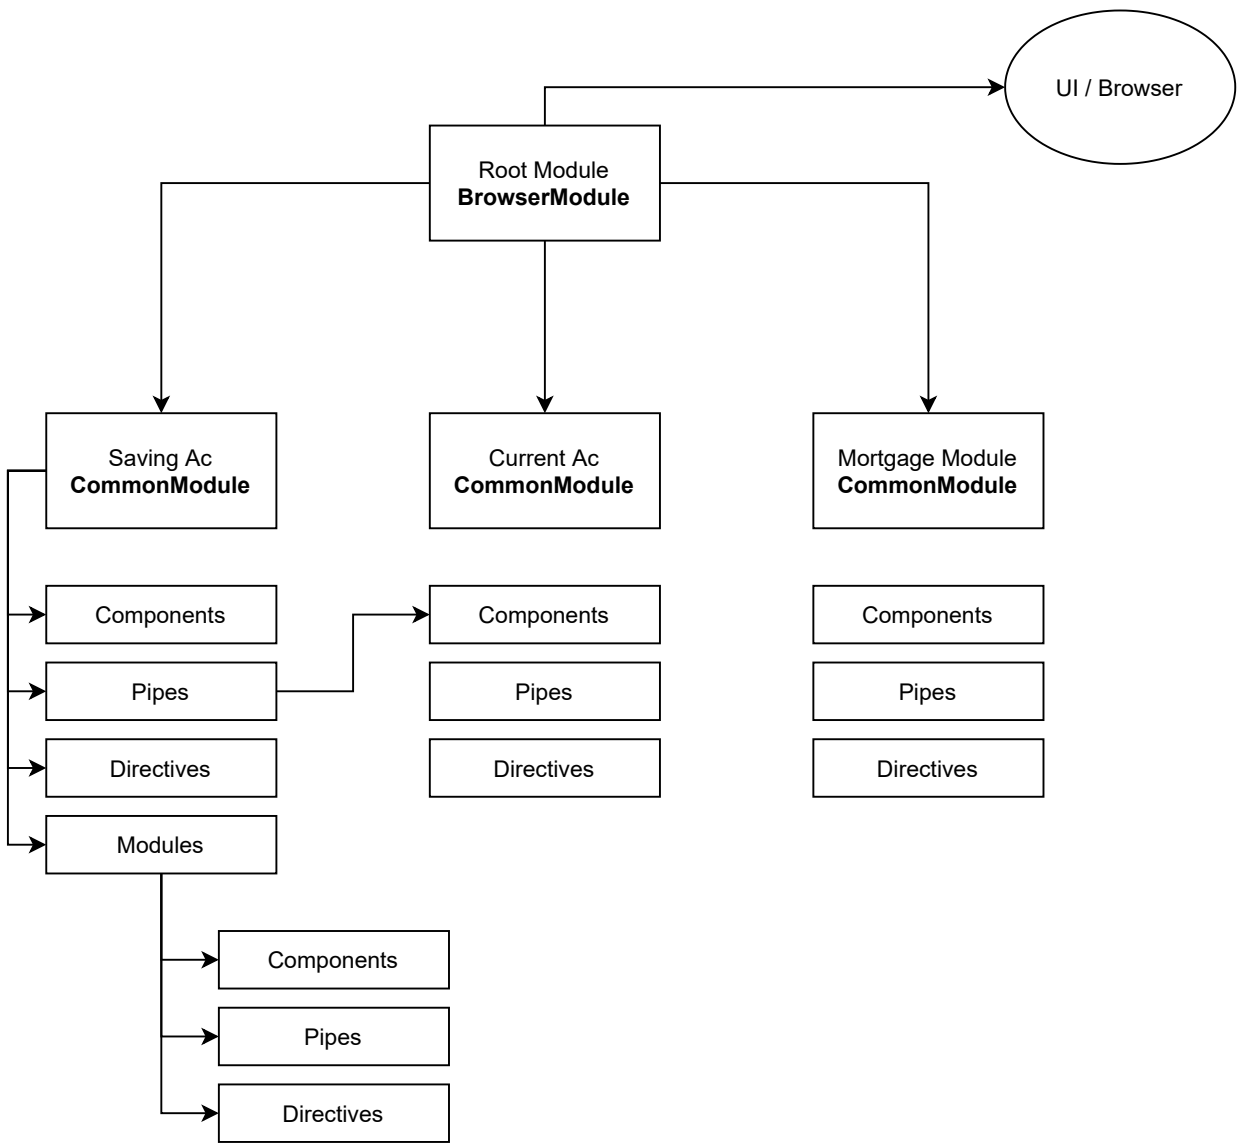

Hash (#) URL vs HTML5 URL / Regular URLs

http://localhost:4200#register ngv1.x

http://localhost:4200/login ng@latest

http://localhost:4200/product/overview/99

http://localhost:4200/product/spec?name=iPhone

Redux unidirectional flow of data

{ type : "", payload : "", data : "", value: "" }

(previousState, action) => newState
